Cause and Effect template using familiar Microsoft Excel Cause and Effect template Purpose: to identify what your customers care about To identify the few process input variables that provide the greatest opportunity to improve the process outputs that your customers care about most This simple Six Sigma tool answers the same questions as the (also easy to use) Measurement Selection Matrix, and the (much more thorough) QFD House of Quality template "What should we measure — that our customers care about?" and... "Where should we focus our attention — to give our customers the most satisfaction for an acceptable cost?" Video: Introduction to QFD & Cause and Effect Matrix

Sample Cause and Effect Matrix example How to use your Cause & Effect Matrix template Find and open your template Find and open your Cause and Effect Matrix template (CauseEffect.xlsx) in the same way that you find and open your other 150+ Systems2win templates. Save your working document following the usual document storage and naming conventions established by your leaders Open a Blank Sheet When you're ready to start doing your own real work... click the button to 'Open a Blank Sheet' Excel Ribbon > Systems2win tab > Open a Blank Sheet This blank sheet is where you will do your real work (not on the Sample sheet — which gives you sample data that is extremely helpful for learning how to use your new tool, but is the wrong place to do your real work) Rename your new sheet. If English is not your preferred language Switch to your language, just like every Systems2win Excel template. Now your team is ready to start using your Step 1) Identify key customer requirements (process outputs) Use 'Voice of the Customer' worksheets to identify KEY requirements. Usually, you will work with less than 7 key requirements. Hide unused columns. Is it your job to put out fires? or to prevent them? Step 2) Rate importance to customer If you use a scale other than the usual 1-10 scale, edit the text box to explain your rating scale. (Whole numbers only) Important: The Pareto Chart won't work without ALL data entered — including 'Importance to Customer' Step 3) Enter the process inputs (steps) Copy your As Is worksheet to serve as the starting point for your To Be version. Step 4) Enter correlations Enter your team's rating of correlations between inputs and outputs Optionally use the text box to explain your team's rating scale. In version 12 and lower, you need to click the 'Pareto Refresh' button In version 13, this is no longer needed. Step 5) Focus your attention to improve the processes with the highest total scores These are the inputs with the most potential for making improvements that your customers care most about. Allow people time to think, ponder, and reflect, and encourage them to return (again and again) to the Hansoi questions to stimulate Lean Thinking. How to Add and Move Rows You can add as many rows as you need above the bottom thin gold line. Don't just 'Insert Rows' To add rows, use the 'Add Rows' button in the Systems2win menu in the Excel Ribbon bar, and to Copy or Move rows, use Insert Copied Cells and Insert Cut Cells (see training video) If you haven't already... watch this training video to learn the most important Excel skills that you will ever learn Excel training video Add, Copy, or Move rows This Cause and Effect Matrix template comes with many other useful Six Sigma tools, and tools for Design for Six Sigma Six Sigma Best Practices Library includes: A3 Report, Audit Checklist, Black Belt Project Storyboard, Black Belt Tollgate Checklist, Cause and Effect Matrix, DMAIC Checklist, DMAIC Roadmap, DPO and DPMO Calculator, Eight Disciplines (8D), Five Whys Process, Margin of Error Calculator, MECE (Mutually Exclusive Collectively Exhaustive), Meeting and Project Roles Template, MTBF and MTTR Calculators, OEE Calculator, Pareto Chart, Process Control Plan, Project Priority Matrix, Project Purpose Worksheet, Project Screener, Project Selection Guide, Sample Size Calculator, SIPOC Analysis, Six Sigma Balanced Scorecard, Standard Operating Procedure (SOP), Takt Time Calculator, Voice of the Customer Table and XY (Cause & Effect) Matrix. you are here Accueil | RESOURCES | Excel Sheets Templates | Cause and Effect Matrix Spreadsheet 18 December 2019 A cause-and-effect matrix — sometimes called a C&E matrix for short — helps you discover which factors affect the outcomes of your Six Sigma initiative. It provides a way of mapping out how value is transmitted from the input factors of your system (the Xs) to the process or product outputs (the Ys). With these relationships visible and quantified, you can readily discover the most-influential factors contributing to value. Download Link error: Content is protected !! Click to see an example The Cause and Effect Matrix is used to understand the relationship between causes and effects. Whenever an output variable drifts out of specification, that is an effect. When an effect goes out of specification, you need to rank the potential causes in terms of importance, and the causes with the highest overall score should be addressed first in improvement efforts. This template is a Microsoft Excel spreadsheet that you can use and modify to meet your specific needs. It can easily be modified to include additional sections if needed. You may, for example, add more rows and columns, or use whatever scoring method that suits your situation. It comes with a cause and effect diagram to help brainstorm and organize your causes. Cause and Effect Matrix Template (28 KB) Cause and Effect Diagram (180 KB) 0 ratings0% found this document useful (0 votes)19 views1 page, active Six Sigma Best Practices Library includes: A3 Report, Audit Checklist, Black Belt Project Storyboard, Black Belt Tollgate Checklist, Cause and Effect Matrix, DMAIC Checklist, DMAIC Roadmap, DPO and DPMO Calculator, Eight Disciplines (8D), Five Whys Process, Margin of Error Calculator, MECE (Mutually Exclusive Collectively Exhaustive), Meeting and Project Roles Template, MTBF and MTTR Calculators, OEE Calculator, Pareto Chart, Process Control Plan, Project Priority Matrix, Project Purpose Worksheet, Project Screener, Project Selection Guide, Sample Size Calculator, SIPOC Analysis, Six Sigma Balanced Scorecard, Standard Operating Procedure (SOP), Takt Time Calculator, Voice of the Customer Table and XY (Cause & Effect) Matrix. Cause and effect matrix is a six sigma tool uses to prioritize the key process input variables (KPIVs) based on priorities of customer outputs (KPOVs). In other words it establish the correlation between process input variables to the customer's outputs during root cause analysis.Cause and effect matrix also called X-Y diagram, Prioritization matrix and correlation matrix. The objective of cause and effect matrix is to mathematically compute the correlation between key process input variables (X's) and Customer outputs (Y's).Cause and effect analysis, process flow map and information about voice of customer are the pre-requisites for cause and effect matrix.A cause-and-effect matrix can be used to evaluate and document relationships between input and output variables. This method is also very much similar to the Quality Function Deployment. It objectively evaluates the team's subjective opinion about the KPIVs.When Would You Use an X-Y Diagram in the DMAIC Process?Cause and Effect matrix is a great tool for prioritizing a long list of possible things and especially uses in the Measure phase of the DMAIC project. This method also used to determine the primary factors for experiments in DOE and also to determine the objective of the Matrix Diagram & FMEA.In a process all the input variables might influence the outcome, but all the input variables are not equally important. Hence develop a mathematical model to concentrate the important input variables with respect to the customers output. Cause and effect matrix helps to identify such key input variables.How Do You Use It?Step 1: First identify the customer requirements or in other words understand the voice of customer. This can be collected by conducting surveys, focus groups and other means to collect their priorities. Place those priorities in at the top of the X-Y diagramStep 2: Assign priority factor for each of the customer outputs. Generally use 1-10 scale, where 1 being the low priority and 10 being the high priority to the customerStep 3: List all possible key input variables or the improvement factors of the process in each row, those are the Xs in the X-Y diagram Step 4: Assess the relationship between key input variables to the customer outputs and rank each input variables accordingly. Recommended to use geometric progression scale (0,1,3 and 9) where 0 being no impact, 1-low impact,3-medium impact and 9- Input has strong impact or correlation on outputStep 5: Cross multiply the customer output priority numbers with correlation rankings and sum the each row at extreme right columnStep 6: Finally, determine the rank based on the highest sum total and highlight the critical few variables. This will help to identify the improvement areas.An Example of an X-Y Diagram.XYZ coffee shop franchise at San Diego downtown area reporting sales de-growth for the past 6 months. Six sigma team conducted root cause analysis and also they want to see the key process inputs that are impacting the process.Conducts customer survey and identified key customer requirementsAssign priority factor for each of the customer outputs.List all possible key input variablesAssess the relationship between key input variables to the customer outputs and rank each input variables accordinglyCross multiply the customer output priority numbers with correlation rankings and sum the each row Ex. for coffee flavor = 9*9+3*6+3*3+9*3+1*4 = 139Finally, determine the rank based on the highest sum total and highlight the critical few variables.Benefits of Cause and Effect MatrixIt helps to include customer inputs for decision makingVisually depict the correlation between key input variable to the customer out putsPriority ranking method helps to take the decision based on score rather than individual opinionsData collection cost may reduce by ignoring non key process inputsHelps to list all the input variables required for the processCause and Effect Matrix Videos Cause & Effect Matrix Excel TemplateHelpful Links
